

VJ TECHNOLOGIES, INC

Drum Inspection Systems

V.J. Technologies, Inc. is the world leader in the provision of nuclear waste inspection systems and services utilizing advanced X-ray imaging technologies. For over 15 years we have supplied, installed and maintained, state-of-the-art radiography systems for our customers. We also own and operate a fleet of trailer based RTR systems, enabling us to provide "turn-key" mobile waste inspection solutions, wherever there is a customer need.

V.J. Technologies provides installed systems that are customized to meet specific plant requirements, yet are based on our proven designs which benefit from our many years of experience operating and maintaining industrial x-ray inspection systems.

Mobile Inspection System

- V.J. Technologies is the principal provider of nuclear waste inspection services to the US DOE.
- Certified NDE operators provide this service, in full compliance with applicable QA programs.

Options:

- Real Time Radioscopy (RTR) using up to 450kV x-rays and image intensifier technology enables easy detection of all prohibited items, including free liquids.
- Digital scanning by linear detector produces high-resolution images in less than 15 seconds.
- Digital image enhancement software, and archival of images in mpeg format on DVD+RW.
