

FOR IMMEDIATE RELEASE

VJ Electronix to Display New Summit II Rework System at SMT/Hybrid/Packaging 2014

April 2014 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection systems, will exhibit in Hall 7, Booth 233 at SMT/Hybrid/Packaging, scheduled to take place May 6-8, 2014 in Nuremberg, Germany. The company recently unveiled its new Summit II next-generation rework system which will be on display, in addition to the XQuik and the Micra Rework System.

VJ Electronix will present the new **Summit II** rework platform. Summit II combines the latest in controls and ergonomics from the Micra with the throughput, accuracy and reliability of the renowned Summit 1800. Summit II features a smaller footprint, yet larger board capacity with easy to adjust board support fixtures. Enhanced *SierraMate* software takes the popular user-friendly GUI and unmatched flexibility through easily customized operation sequences.

The Summit II is designed for years of continuous use. Improved lighting and optics make alignment of difficult components, even 01005s, easier than ever. Incorporation of the Micra digital flow control provides optimized reflow profiles for everything from micro passive devices and PoP components through the largest DIMM connectors and CPU sockets. The enhanced side-view camera allows the operator to watch the rework process up close.

Also on display, the new **XQuik** is a small, general purpose X-ray system for inspection of items such as electro-mechanical devices, sensors, molded parts, as well as mail parcels and biological samples. With a size of just more than two feet cubed and a low, affordable price point, the XQuik is well suited for engineering labs, machine shops and quality control departments for a wide variety of applications.

Finally, stop by the booth to see the **SRT Micra** mobile device rework system. The **Micra** is VJE's latest benchtop platform, specifically designed for the rework of devices ranging from 01005 passives to large PoP components. The Micra is a general purpose rework tool that also is designed to provide advanced rework capability to the latest high density electronic designs and devices such as smart phones, tablets, GPS, and other portable products.

About VJ Electronix

VJ Electronix, Inc. manufactures production ready, automated Rework and X-ray inspection systems with many advanced capabilities. The company frequently provides custom solutions tailored to satisfy specific application requirements. VJ Electronix is a worldwide leader in X-ray Inspection and Rework equipment.
