

## FOR IMMEDIATE RELEASE

### VJ Electronix to Highlight the New Summit II and XQuik at NEPCON China

March 2015 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection systems, will exhibit in Stand B-1D10 at NEPCON China 2015, scheduled to take place April 21-23, 2015 at the Shanghai World EXPO Exhibition & Convention Center. VJ Electronix will highlight the new high performance Summit II and XQuik with AccuCount for counting components stored in reels.

The new Summit II is the latest semi-automated rework system. Improved ergonomics combined with next-generation controls and proven heating technology provide the greatest performance and flexibility. Summit II features a smaller footprint, yet larger board capacity with easy to adjust board support fixtures. Enhanced SierraMate software takes the popular user-friendly operation to the next level with a simple icon driven GUI and unmatched flexibility through easily customized operation sequences.

With the XQuik with AccuCount Technology, maintaining inventory control of component reels has never been faster or easier. The XQuik with AccuCount system automatically counts components as small as 01005 with better than 99 percent accuracy. The process takes only seconds, compared to many minutes required by typical counting processes. The new XQuik II handles reels from 7 to 15".
