

FOR IMMEDIATE RELEASE

VJ Electronix to Celebrate Its 15th Anniversary at APEX

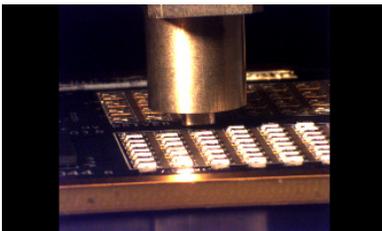

January 2018 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection and component counting systems, will exhibit in Booth #2551 at the 2018 IPC APEX EXPO, scheduled to take place Feb. 27-March 1, 2018 at the San Diego Convention Center. The company will demonstrate the latest enhancements to its rework and X-ray product lines.

The revolutionary XQuik II with AccuCount Technology is now faster than ever. With available material handling automation, the XQuik system automatically counts components at up to twice the original speed. Parallel processing allows the system to acquire images and calculate component count in parallel with bar code scan, loading and labeling of reels.

The Summit 1800i is an improved version of the world's most popular rework system. VJE has maintained all of the benefits of high efficiency convection heating and the renowned 1-2-3-Go interface, coupled with updated technology for greater reliability and an improved price point. Further refinements enhance the system's performance with ultra - small components like 01005s, while maintaining its capabilities with large boards, oversized CPU sockets, connectors and large BGAs.

Also on display, the popular Micra is designed for rework of smaller, high performance components, such as Chip Scale Packages (CSP), Package on Package (PoP) and Micro Passives (01005). The enhanced Micra provides a larger 35 mm alignment field of view and an optional full travel programmable X-Y motion, expanding its range of applications and allowing greater automation for pallets and multi-up trays.

VJE's new High Capacity Scavenger provides high throughput, non-contact solder removal. With a variety of larger tips and an increased volume solder trap, site dressing time is drastically reduced while time between maintenance is extended. The increased capacity is ideal for large BGAs, CPU Sockets and column grid arrays. Special tips are available to support bulk removal of passive devices and LEDs.

About VJ Electronix

VJ Electronix, Inc. manufactures production ready, automated Rework and X-ray inspection systems with many advanced capabilities. The company frequently provides custom solutions tailored to satisfy specific application requirements. VJ Electronix is a worldwide leader in X-ray Inspection and Rework equipment.
